Software Engineer focused on delivering resilient, maintainable, and business-aligned software solutions. Experienced in designing domain-driven backend systems, balancing engineering quality, technical trade-offs, and delivery timelines to support reliable software releases. Passionate about understanding business domains and building scalable products that solve real-world problems.

WORK EXPERIENCE

• Axelate Solutions — Software Engineer

Hybrid / Jun 2025 - Jun 2026

- Developed domain-driven backend services for a multi-tenant B2B SaaS platform using Java 21 and Spring Boot, designing rich domain models with clear separation of concerns, while managing PostgreSQL schema evolution through Liquibase to ensure data integrity, backward compatibility, and reliable production deployments.
- Developed tenant-aware security capabilities with JWT, OTP, and DPoP authentication, enforcing tenant isolation across domain and database layers while maintaining high engineering quality through behavior-driven testing, Testcontainers, WireMock, SonarCloud quality gates, and end-to-end observability.
- Led the delivery of integrations with external business platforms, working closely with stakeholders and third-party vendors to interpret requirements, navigate ambiguous API documentation, resolve production issues, and implement reliable solutions supporting critical business operations.
- Applied AI-native engineering practices, including spec-driven development, Claude Code, and MCP-integrated workflows with GitHub and Jira, to accelerate solution design, implementation, refactoring, and delivery while maintaining human oversight of technical decisions.

• Crayon Data — Associate Software Engineer

Hybrid / Aug 2023 - Jun 2025

- Developed GraphQL APIs using Hasura for a configuration-driven mobile platform and built a fault-tolerant Spring Boot email notification service with automated retry mechanisms, improving data access efficiency and operational reliability.
- Enhanced performance and security for a digital banking platform through database optimization, PL/SQL development, and application code protection techniques.

• Inoesis Technologies — Software Developer Intern

Remote / Aug 2021 - Feb 2022

- Implemented Django-based REST APIs and integrated Twilio Video APIs for teleconsultation and appointment management features in healthcare applications.

PROJECTS AND CERTIFICATIONS

Personal Expense Tracker  — Built a Flask and PostgreSQL-based expense tracking application with analytics dashboards, monthly insights, and automated CI/CD deployment, serving a growing user base.

Form Bot  — Developed a Telegram-based form automation platform using Python, Telegram Bot API, and PostgreSQL, enabling efficient form creation and response management for active users.

SKILLS & COMPETENCIES

- **Core Technologies:** : Java, Python, SQL, JavaScript, PostgreSQL, MongoDB, MinIO, Bash
- **Frameworks:** : Spring Boot, Spring Security, Spring Data JPA, GraphQL, React.js, Node.js, Django, Flask
- **Engineering Practices:** : SonarCloud, CI/CD, Docker, GitHub Actions, JUnit, Cucumber, Testcontainers, WireMock
- **AI-Assisted Development:** : Spec-Driven Development, Claude Code, AI-Assisted Software Engineering, MCP (GitHub & Jira Integration), Human-in-the-Loop Review

EDUCATION

• SSN College Of Engineering

Chennai

BE in Computer Science and Engineering; GPA: 8.38

Aug 2019 - Jun 2023
