SUMMARY

Software Engineer focused on delivering resilient and maintainable software solutions aligned with business objectives. Passionate about understanding business domains, upholding high engineering standards, and balancing quality, technical trade-offs, and delivery timelines to ensure reliable software releases.

EDUCATION

- SSN College Of Engineering** Chennai
BE in Computer Science and Engineering; GPA: 8.38 *Aug 2019 - Jun 2023*

SKILLS & COMPETENCIES

- **Languages:** : Java, Python, SQL, JavaScript, Bash, C
- **Frameworks & Technologies:** : Spring Boot, Spring Security, Spring Data JPA, React.js, Node.js, Django, Flask, GraphQL
- **Databases & Storage:** : PostgreSQL, MongoDB, MinIO
- **Cloud & DevOps:** : Docker, GitHub Actions, Jenkins, DigitalOcean, CI/CD, GitFlow
- **Testing & Quality:** : JUnit, Cucumber, Testcontainers, WireMock, SonarCloud
- **AI-Assisted Development:** : Spec-driven development, spec-to-code workflows, AI-assisted engineering (Claude Code/Web/Skills), MCP integrations with GitHub & Jira, human-in-the-loop review process

WORK EXPERIENCE

- **Axelate Solutions — Software Engineer** *Jun 2025 - Jun 2026*
 - Developed domain-driven backend services for a multi-tenant B2B SaaS platform using Java 21 and Spring Boot, implementing rich domain models while keeping business logic independent from application and infrastructure concerns.
 - Owned database schema evolution using PostgreSQL and Liquibase, ensuring data integrity, backward compatibility, and seamless production deployments.
 - Developed tenant-aware security capabilities, integrating JWT, OTP, and DPoP authentication while enforcing domain-level and database-level tenant isolation.
 - Led the delivery of integrations with external business platforms, working closely with stakeholders and third-party vendors to interpret requirements, navigate ambiguous API documentation, resolve production issues, and implement reliable solutions supporting critical business operations.
 - Established high engineering quality standards through behavior-driven testing, Testcontainers, WireMock, SonarCloud quality gates, and end-to-end observability.
 - Implemented CI/CD pipelines and cloud deployments using GitHub Actions, GitFlow, and DigitalOcean, utilizing App Platform, Container Registry, Managed PostgreSQL, and S3-compatible object storage to support reliable and scalable application delivery.
- **Crayon Data — Associate Software Engineer** *Hybrid | Aug 2023 - Jun 2025*
 - Developed GraphQL APIs using Hasura for a configuration-driven mobile application, enabling flexible and efficient data retrieval.
 - Built an automated email notification service in Spring Boot with retry mechanisms to improve reliability and fault tolerance.
 - Enhanced backend performance and security for a digital banking platform through database optimization, PL/SQL development, and code obfuscation techniques.

- **Inoesis Technologies — Software Developer Intern**

Remote / Aug 2021 - Feb 2022

- Implemented Django-based REST APIs and integrated Twilio Video APIs for teleconsultation and appointment management features in healthcare applications.

AI-NATIVE SOFTWARE DEVELOPMENT PRACTICES

- **AI-Augmented Development Workflow**

2025 - 2026

- Adopted spec-driven development approach using structured requirements to drive implementation, reducing ambiguity and rework.
- Used Claude Code and Claude Web for spec-to-code workflows, accelerating feature delivery while maintaining engineering validation.
- Integrated MCP tools with GitHub and Jira to enable context-aware development across codebase, issues, and PR workflows.
- Established a human-in-the-loop review process, where AI-generated plans and implementations are reviewed and approved before execution.
- Applied spec-to-delivery pipeline, translating product requirements into structured design specs, implementation steps, and testable outputs.
- Leveraged Claude Skills to standardize reusable development patterns, code quality checks, and automation workflows.

PROJECTS

Personal Expense Tracker — Expense tracking app built with Flask and PostgreSQL featuring a category-based dashboard, monthly breakdowns, and CI/CD on Vercel.

2022

Form Bot — Built a form automation platform leveraging Python, Telegram Bot API, and PostgreSQL for creating forms and managing user responses through Telegram.

2021
